

## Phone Systems

Are you looking at implementing a phone system for your business?

For small businesses there are very few independent places to turn to when looking to buy a new telephone system. If you call BT, you will be recommended a BT system. If you approach a local dealer, you will more than likely be advised to buy a Panasonic, simply because this is the switch that most local dealers sell. However, there are many telephone systems on the market that may be appropriate for your needs. At Support IT provide impartial advice and supply the best phone system for your business.

The current communications market is a minefield for anyone not working with these technologies everyday. Typical questions businesses ask themselves include:

Should I have a VoIP or traditional system, are Cisco Avaya, Mitel, Nortel or any of the other 100 vendors standing heads above the rest? What is the actual cost to our business in line rental, call charges, Mobile phone contracts, which SIP (Skype like solution for corporate use) provider should I use? When is the right time to change my phone system? What is CTI? What can telephony do for my staff productivity? How best can I give remote users an extension?

Support IT can answer all of these questions and find the best phone system for your business, contact us using our online form or call us today on 0845 680 0210 where you can also book your FREE Problem Prevention IT Audit Worth £295 Pounds!
